RE: NRG-GI008 Video from webinar with Natera

On July 17, 2024, the Clinical Coordinating Department (CCD) facilitated an NRG-GI008 webinar with Natera. The video from this webinar has been posted on the NRG Oncology website. The focus of the webinar was to review the processes for submitting blood and tissue specimens to Natera for central ctDNA testing so that potential delays in sites receiving ctDNA results are minimized. Best practices were reviewed, and helpful hints were discussed. Hopefully, the information provided in the webinar will help to reduce the number of Data Clarification Forms (DCF) that sites receive from Natera when they have questions about the submitted specimens. If you were unable to attend the webinar, we strongly encourage you to review the video at your earliest convenience.

The video is posted on the NRG Oncology website under Clinical Trials/NRG-GI008/Documents and Materials. You will need to login to the NRG Oncology website to access the video.
